About PIPELINE

Our

Mission

PIPELINE (Penn State Intern Pipeline Links to Navy Engineering) is a workforce development and research program funded by the Office of Naval Research. We connect students with research opportunities that support Department of Navy (DoN) needs, with an emphasis on undersea technologies. PIPELINE also engages faculty and researchers through collaborative projects and hosts career development experiences that prepare students for technical careers in naval labs and facilities.

Our

Messaging

PIPELINE connects Penn State with the U.S. Navy, offering real opportunities to engage in research, develop innovative solutions, and explore technical careers in national defense. Grounded in impact, integrity, and inclusion, the program supports both academic-year projects and summer internships. Every experience is designed to build skills, purpose, and direction. We refer to ourselves simply as PIPELINE.

Brand Promise

1 Opportunity

Our work matters. From prototyping to problem-solving, PIPELINE students take on real challenges with real consequences.

2 Impact

Our work matters. From prototyping to problem-solving, PIPELINE students take on real challenges with real consequences.

3 Integrity

We lead with character. Every decision, every project, every partnership is rooted in honesty and respect.

4 Innovation

We are driven to develop new ideas, explore emerging technologies, and deliver creative solutions that support real-world defense challenges.

5 Direction

Students discover where they're headed and why it matters. Through mentorship and mission-driven work, we shape leaders who know where they're going and have the tools to get there.

6 Inclusion

We open doors for those historically excluded from STEM and defense. Diversity strengthens teams and drives better outcomes.

Partnerships

**Office of Naval

PennState
College of Engineering

**Penn State College of
Engineering**

PennState
Applied Research Laboratory

**Penn State Applied Research
Lab**

PIPELINE is funded by the Office of Naval Research, which supports the program's mission to develop future talent in defense-related fields. The Penn State College of Engineering hosts and administers the program, providing academic oversight and institutional support. The Applied Research Laboratory (ARL) serves as a key research partner, offering students and faculty access to Navy-aligned projects, mentorship, and real-world technical challenges.

Primary Logo Use

Circle Lockup A

Logo A (full-color circular lockup) should be used most frequently. It is intended for use on solid, light-colored backgrounds to maintain visibility and clarity. Avoid placing it over high-contrast or busy areas of photographs. Use this logo when there is enough space to clearly read the text around the circle (“Intern Pipeline Links” and “to Navy Engineering”).

Circle Lockup B

Logo B (black and white circular lockup) should only be used in black and white materials or when color printing is not possible. It should not be used in place of the full-color version for general applications.

Secondary Logo Use

Stacked Lockup A

**INTERN PIPELINE LINKS
TO NAVY ENGINEERING**

Lockup A (full-color stacked version) should be used only when horizontal space is limited, and the circular logo does not fit well. This version works best in narrow or vertically constrained layouts.

Stacked Lockup B

**INTERN PIPELINE LINKS
TO NAVY ENGINEERING**

Lockup B (black and white stacked version) should only be used in black and white materials or when color is not an option. It should not replace the full-color version in standard applications.

Other Logo Use

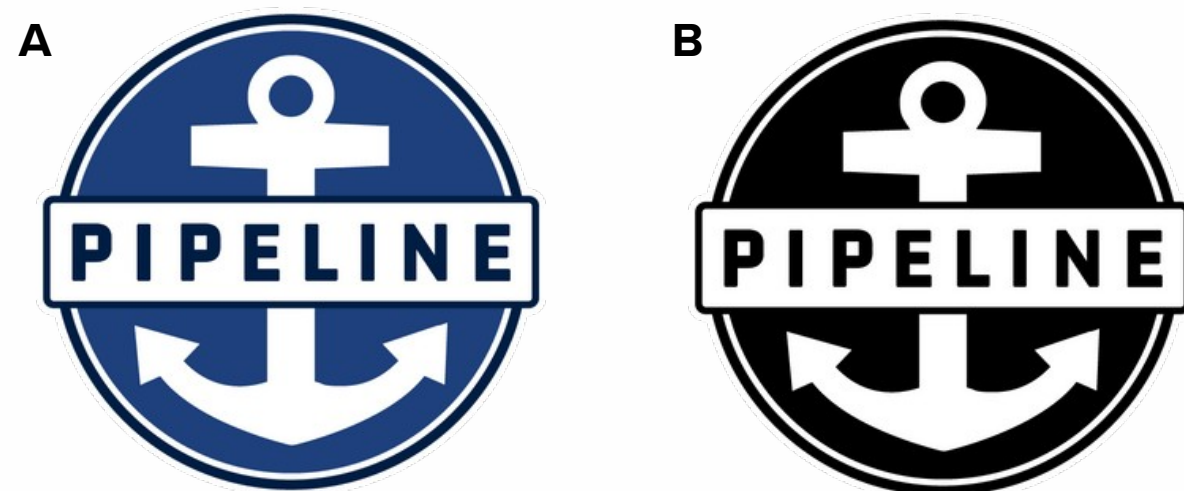

Horizontal Lockup - A and B

- Lockup A (full-color horizontal logo with text) should be used in situations where a wide, narrow format is needed and space doesn't allow for the circular or stacked versions. This version works best in headers, banners, and documents where horizontal space is available.

- Lockup B (white horizontal logo) should only be used on dark or colored backgrounds where the full-color version would not be legible.

Alternate Circular Lockup – A & B

- Lockup A (full-color version) should be used in most general applications where a compact, centered design is preferred. This version works well in digital or print materials and should be placed on solid, light-colored backgrounds for maximum legibility.

- Lockup B (black and white version) is reserved for black and white applications only. It should be used when color printing is not an option or when the design requires strict monochrome styling.

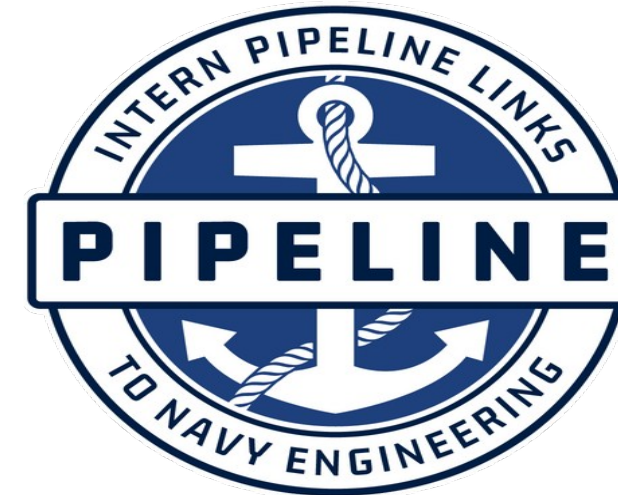

Logo Don'ts

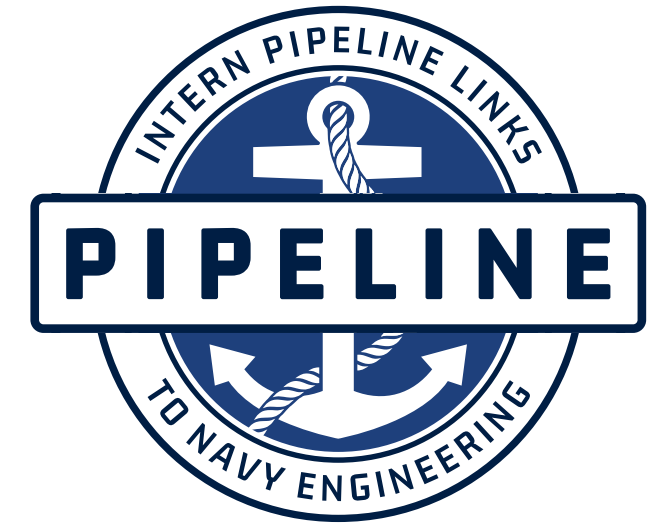

Do not rotate

Do not change to
non-approved color

Do not stretch

Do not change icon
and text proportions

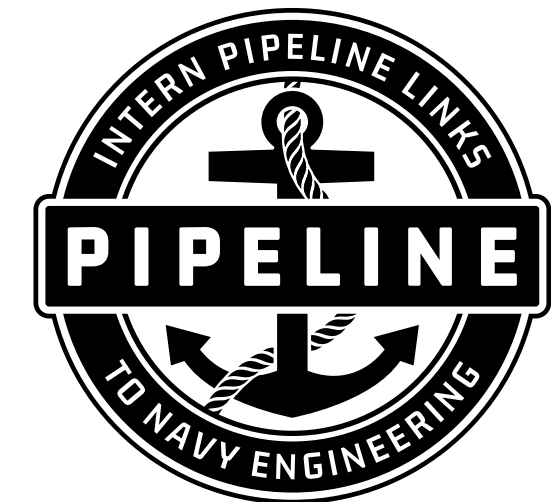

Do not change to gray scale

Do not add
dropshadow

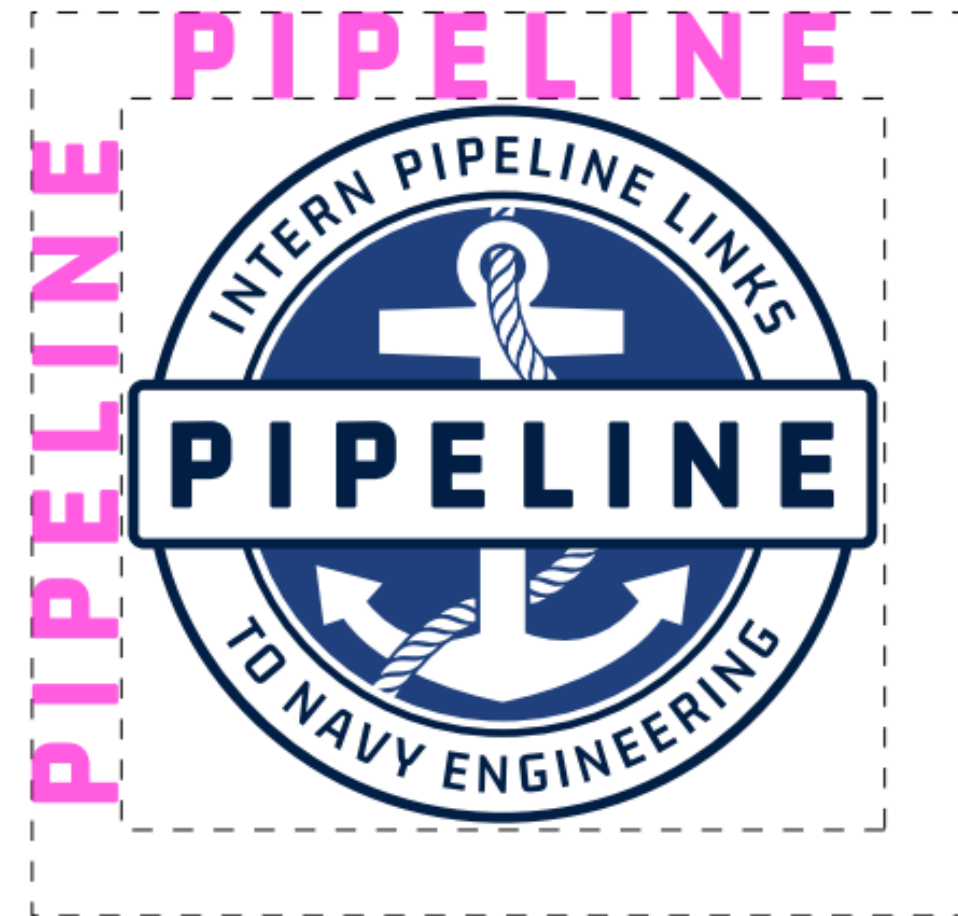

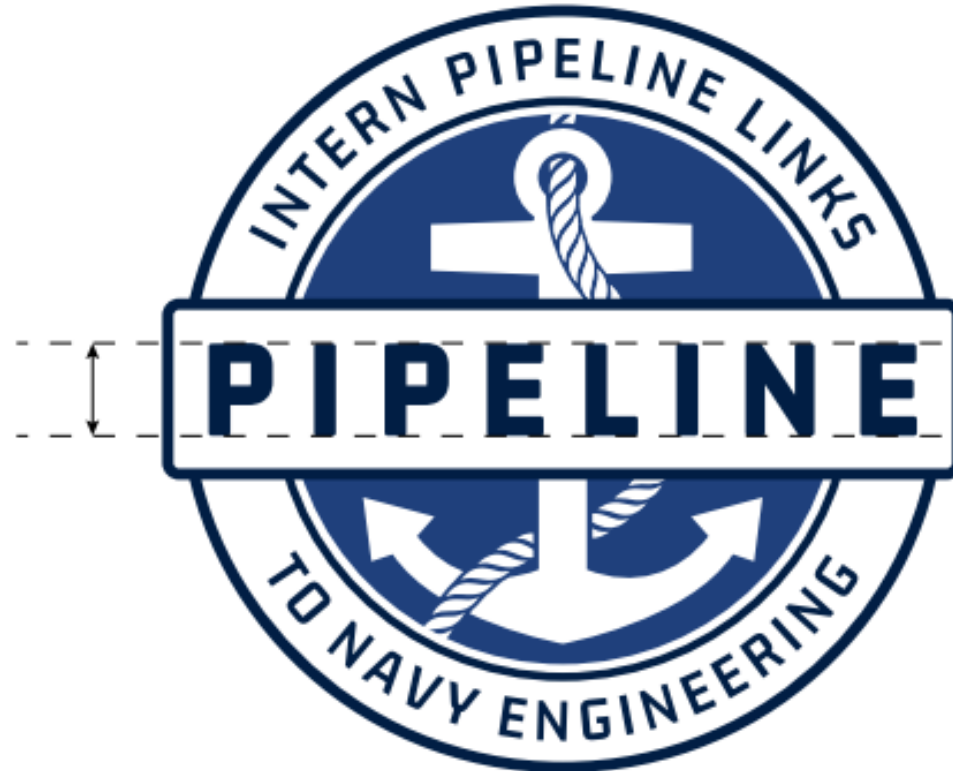

Do not remove outline with
background

Do not reverse black
and white

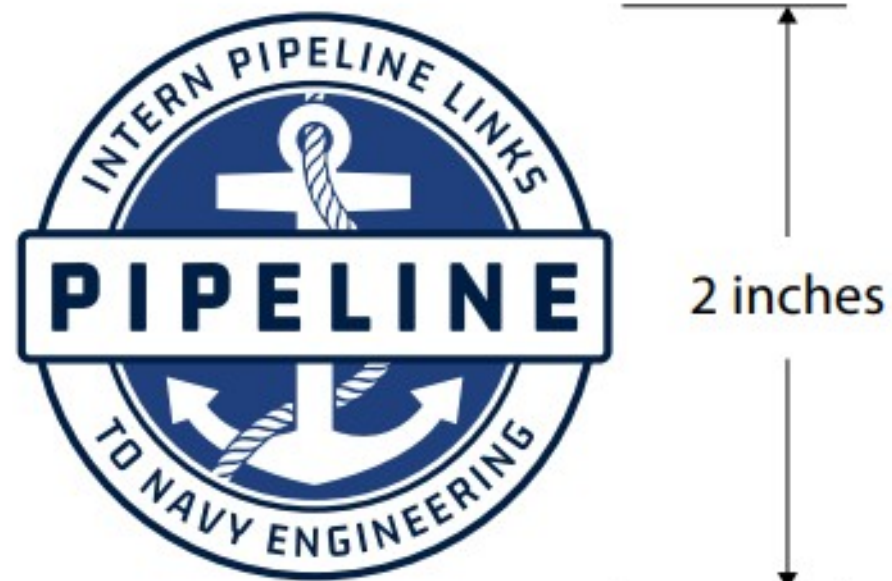

Logo Spacing

Leave sufficient clear space around the logo. A clear space no smaller than the height of the “PIPELINE” wordmark should be left surrounding all sides of the logo, as displayed in the diagrams below.

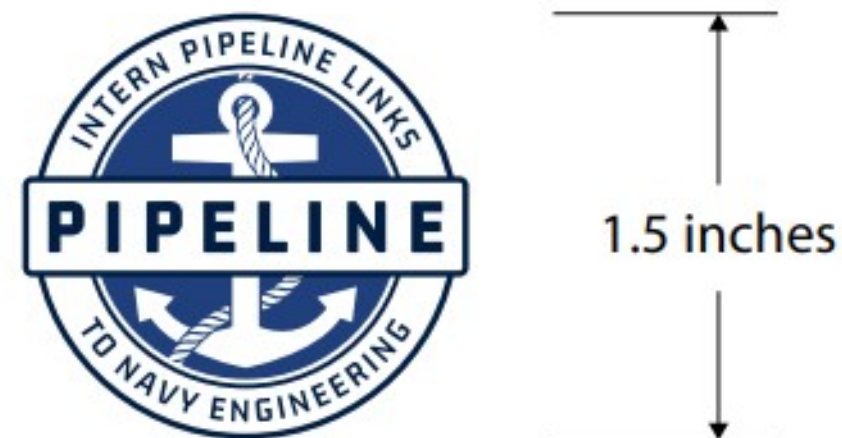

Logo Sizing

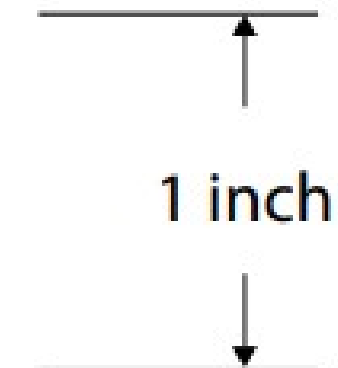

Main Logo at various sizes to determine minimum print size

Would suggest that the minimum size be somewhere around 2 inches, perhaps as low as 1.5 inches in height.

Below 1.5 inches in height text begins to be difficult to read and other graphic elements begin to look muddled.
